DOMjudge sample problem
`hangman` – 'Hangman'

Problem description

This is a multipass-problem. In a multipass problem your submission runs multiple times for the same testcase. For this specific problem you need to solve the game 'hangman'; it should guess the right letter(s) and solve the word(s).

Input specification

You are given two lines;

- the first containing the all guessed letters, initially empty.
- the second a line containing '_' & ' ', where '_' must be guessed by your program

you can guess any character within the lowercase range 'a-z' by outputting that one character. You must only guess a letter once and can only guess 26 times.

Sample input/output

Sample input and output for this problem:

Input	Output
`--------`	`e`
`egjmou` `_omju_ge`	`d`
